

Vaccination and Autism
MSG Activist forced drugged
MSGmyth.com forum members

The establishment is going after anyone who is not buying the official line that vaccinations are safe.

John Erb, a prominent opponent of monosodium glutamate, was grabbed off the street, taken to a psych ward, and drugged. John was planning to announce his new autism institute on a radio program and had planned on making a major announcement, but instead was grabbed just hours before. The establishment was not fond of his new institute in Chesapeake Virginia, which is for independent research on autism.

Here are some quotes from Carol Hoernlein of MSGtruth.org:

Saturday, February 14 - "I just got off the phone with John Erb. The officials in Virginia Beach have arrested him WITHOUT criminal charges and have locked him in a cell there. They are officially going after him for wanting to further investigate the vaccine and glutamate link to autism. They are trumping up charges of a psychiatric nature due to his announcement last week that he will be opening a center in Virginia for INDEPENDENT research on autism."

Sunday, February 15 - "I just got off the phone with the Police Dept - they have no record of arresting a John Erb. I asked where they would take him if it was a medical facility. (The Previous day) John said they were injecting him and trying to commit him. He still sounded like calm John - like always, he was worried about missing the radio show and autism picnic he had planned. But he accidentally dialed my number, and I recognized his voice right away. He said he only had a minute before he got cut off. He told me he was in Virginia Beach and that he was in a cell. The references to shots, made me think - they put him in a psych ward to shut him up. When I called Tidewater in VA Beach, they refused to tell me if he was there. They said only that they would pass along a message if he was there. "

Later on Sunday, Carol spoke with John's wife and John himself. John said he had been arrested and taken straight to Virginia Beach Psychiatric, where he was committed without charges and without cause. Fortunately, a psychiatrist on staff knew John and told the hospital that there was nothing wrong with John. And that the earliest he could go home was on Tuesday. Carol did not hear from John until Thursday. She said "he got out of the hospital by knowing his rights" and was allowed to walk out on his own. Carol said he tried to cross the street, but three officers prevented him from doing so. But allowed him to stay on the public right and eventually get help. She said he is in hiding now, and the establishment left him penniless and took away the things that meant so much to him. Also, Carol said John found out later he was diagnosed as "Attitude Adjustment Disorder."

John advocates that autism is likely linked to monosodium glutamate in the food supply and vaccines and had recently spoke at the Inter-Agency Autism Coordinating Committee. This is where he announced his plan for his global autism center in Virginia, just 10 days earlier. Here is what he submitted to the Autism Committee.

Retaliation by the establishment was not new to John. He has had his horse killed

and his farm house burned. John did often confess he worried about his safety.

John Erb has spent many years dedicated to educating people about the dangers of MSG. John's theories and research leads him to believe that the food additive Monosodium Glutamate is a direct cause of Obesity, Diabetes, Autism and Attention Deficit Hyperactive Disorder. He even wrote a book titled 'The Slow Poisoning of America.' <http://www.rense.com/general67/msg.htm>

John has been on a mission:

In 2007 John petitioned the FDA to Revoke the GRAS (Generally Regarded as Safe) status of Monosodium Glutamate. Here is the petition.

<http://www.thefoodishorrible.com/uploads/11523/MediaFiles/FDA-2007-P-0178-0002.pdf>

Here is a quote by John Erb on May 15, 2008:

"I realize that we are up against big corporate money to keep this nicotine for food in the food and vaccine supply. But with your voice, and the voices of people you know and have educated with your wisdom, I am confident that we can finally rid ourselves of this poison. We are on a mission to save the planet, and we have the passion and commitment to do it! "

And another quote by John on May 22, 2008:

"Hello Everyone, thank you for the support and your continued effort to tell others. I am not worried at all by what Lauren found out. I have fought long enough to know that when they Own the system, you cannot use the System to change it. A battle fought in their courts cannot be won, they simply have too much financial support. "

"My Petition to the FDA was just using the proper channels, I have an Ace up my sleeve to make the change: "

"Educating the public and creating a grassroots effort to shed light on all this and demand action will be the direction that is needed. "

"I, and a group of people to assist me am currently working on this, let me know what you think of it."

"In the next few months, I will be mounting a large white horse and carrying a large banner that has a slogan bringing attention to the petition. I will be riding on the back highways through small villages and towns, on a journey to get to Washington DC. At each place of population I will be giving speeches to all who are gather. I have an associate driving ahead of me to arrange for things in the upcoming town, and a follow vehicle to protect myself and the horse. "

"We intend to have a camera and sound crew to document the highlights."

"It is our intent that by the time We reach the Capital, We will have raised a Grassroots awareness that will allow us to have much more clout against the Corporations, and the Government agencies that protect them. "

The following referenced article should have encouraged scientists to look for a connection of Autism to the ever increasing use of free glutamate (as in MSG) and

glutamate rich food additives in our food supply:

Pascher et al. ("Methylmercury alters glutamate transport in astrocytes." *Neurochem Int.* Aug-Sep,200;37(23);199-206).

It states, "In the absence of glutamate, neurons are unaffected by acute exposure to mercury...Co-application of nontoxic concentrations of methylmercury and glutamate leads to typical appearance of neuronal lesions associated with excitotoxic stimulation (Matyja and Albrecht 1993)." Although ethylmercury, not methylmercury was used in vaccines, it is more than likely that both would have the same effect when combined with glutamate. Glutamate containing substances are added to many immunization serums, along with gelatin, which contains glutamate. We agree with Jack Samuels of www.truthinlabeling.org, when he said, "One must ask if autism is directly related to genetic defect, or if a predisposition for autism is inherited, a predisposition that is activated due to the ever increasing amount of processed free glutamic acid (glutamate) and aspartame that pregnant women are exposed to." Indeed, the public and most scientists are completely unaware of the amount of factory created glutamate rich substances are added to processed foods today, including baby formulas. They buy into the glutamate industry's PR campaigns which state that MSG does not cross the blood brain barrier, placental wall, or into mother's milk, even though hundreds of tests prove otherwise: i.e., tests on lab animals since the 1970's demonstrating the harmful effects of MSG or glutamate. MSG is about 78% free glutamic acid. Glutamate rich food additives such as autolyzed yeast, yeast extract, carrageenan, hydrolyzed vegetable/meat/dairy proteins, and at least 100 other similar factory created substances, contain less than 78% free glutamate. Thus, by law, they do not have to be labeled as MSG. Consequently, food manufacturers have no problem adding several such additives to a single product to pump up the flavor and mask chemical or tinny flavors. One only has to ask, why are the newest cutting edge pharmaceuticals being developed to treat neurological disorders from Parkinson's to Schizophrenia, glutamate blockers? Will they be the new way to treat Autism, making drug companies rich, or will the people of this country come to realize that they and their children are being destroyed by food additives that alter the brain and lead to chronic health and neurological problems. The injured children of today will cost this country billions in health care tomorrow. John Erb is just another caring citizen, trying to save our health and that of our children.
