Bestiality and Religion

Richard L. Matteoli

*Those who lie down with dogs, get up with fleas.* Blackfoot proverb.

(Monterey, Calif.) — Bestiality, one aspect of Zoophilia, causes cancer of the penis documented in a Brazilian interdisciplinary study.[1] Zoophilia, is categorized in the DSM-IV as a *paraphilia not otherwise specified*. Zoophilia is an erotic fixation on animals that may result in sexual excitement through real or fancied contact.

Book illustration:
Isfahan, Iran, 15th Century

Kinsey reported 8% males and 3% females had sex with animals.[2-10] Incidence is higher with people living in a pastoral setting. The Brazilian study showed those living in a pastoral setting had a 35% participatory rate among men.

Ancient Greek sodomizing a goat, plate XVII from ‘De Figuris Veneria’

The Brazilian penile cancer from bestiality study involved 492 where 118, 24%, presented with cancer of the penis from which there is a direct correlation with the
pastoral setting. This may give credence to male circumcision’s origin in Africa and the Middle East millennia before any current thought. Feminine reproductive organ pathology is not evident compared penile to lesions.

Female Genital Mutilation, according to Dr. Pia Gallo of the University of Padua, states its reason is feminine jealousy in genetic difference where Northern desert tribes invaded southern portions of Africa and African women have larger genitalia. From a punishment it then became a social phenomenon because of genetic traits being passed through intermarriage.

The taboo of zoophilia has led to stigmatized groups being accused of it, including blood libel.

Zoophilia’s erotic fixation may also be fanciful without actual physical bestiality and exploited by pornography mainly directed at a male audience.[13] 10% of women’s sexual fantasies involve zoophilia.[14] Contemporary Japanese use involving the octopus is a rape theme of being violated by the Tentacle Monster. Animal sex permeates mythology.
18th Century Indian miniature depicting women practicing zoophilia in the bottom register.

Some sex toys for women are sculpted in the form of animal penises.[15]
RELIGION

Bestiality existed longer than any documentation found. Some consider bestiality a sexual orientation. Bestiality can lead to interpersonal violence, or a factor in its exacerbation. Archeology proves mythic bestiality existed in the religious context worldwide.[16] Religious rituals are violent reenactments used to channel violence.[17] Intertwining factors to consider are religion including genetics to the origins of human history itself.

Genetics

The female genital reproductive system may become a personal, interpersonal, family and social nightmare creating much angst. Avaginosus, having no vagina, in all variants affects 1:9000 females. Turner and Swyer are two others that cause dysfunction. Two genetic conditions may be used for male oriented sexual purposes by the female:

Sacrococcygeal Teratoma

Feminine based primitive animalistic theology[18-20] and bestiality mediating human to animal may derive from the sacrococcygeal teratoma thought the human tail. This teratoma occurs in 1:35,000 births being about 4:1 more prevalent in females.

Congenital Adrenal Hyperplasia

Congenital Adrenal Hyperplasia with high Middle Eastern incidence is a genetic condition of 21-hydroxylase deficiency.[21] Hermaphroditus, sister of Pan and Priapus is a goddess aspect of the bisexual deity. Genital reassignment is used with this condition.
Greece and Rome

Half-brothers Pan and Priapus with sister Hermaphroditus were children of Hermes, protector of herdsman, as a father. Bestiality was a norm among shepherds. Their Anatolian origins with some other Greek gods had origins in now Turkey. Hekate also originated in the region that demanded priests to be castrates, possibly, in part, men who had developed lesions large enough to require such surgery. Feminine lesions are not as evident and surgery was impossible. Aphrodite and Venus, where horticultural Pan and Priapus played a large factor in their bestial rituals also required castrated priests. Donkeys figured predominately in the Roman Bacchanalia. The Greek work of fiction The Golden Ass is of human transformation into a donkey with sexual encounters.[22]

Many goddesses were known as the Lady of the Beasts where nymphomania was cured. Women had snakes coil around their thighs and insert their heads vaginally. Also, including Crete, women went into a wooden cow to have bull intercourse.

Hermaphroditus with Pan and Priapus shared psychosexual social functions in both sexual desire and fertility. The feminine carries desire into social acceptance while the masculine serves her animus projection through his anima’s acceptance.[23,24] In this structure both achieve release of sexual tension.
Mesopotamia

Bestiality was common in 3000 BC Mesopotamia. During the seven day and night Spring Fertility Rites dogs and other animals kept the orgy constant. The Codex of Hammurabi, 1900 BC made bestiality a crime. Yet this law waxed and waned, like sinful circumcision within Christianity. During spring festivals bestiality prevailed.

The epic of Gilgamesh examples bestiality among temple prostitutes of Inanna - Ishtar. In Gilgamesh Shamhat was the temple prostitute who saw the wild man Enkidu in the forest. Shamhat decided to have sex with Enkidu to civilize him and transform him more human. Enkidu was red haired as later was Hebrew Esau where Esau means red. Shamhat shaved off the hair of Enkidu. The gods made Enkidu and Gilgamesh opposites, but when they met the wild man and civilized man became friends.[25] Gilgamesh is not just a story of a man losing his friend in death. Mostly Gilgamesh is a story of a man’s transformation of the Ego into the Self for civilization.

Gilgamesh is as the Lion; Enkidu the Bull
Ishtar 8 Sided Star of Male Sacrifice Between

Mesopotamian theological use is that civilizing woman, as woman in nature, tames animal man with sex. Long before Mesopotamia somewhere over the vast regions of the earth bestial iconography became religious practice after millennia of such behavior. It is as if deifying the animals they had sex with. Yet, the male must still suffer some sort of sacrifice of his existence to conditionally be with woman. Circumcision is a sacrifice to her.
Egypt

Pre-dynastic Egypt worshipped animal forms almost exclusively. Bestiality is seen in hieroglyphics and tombs since 3000 BC including kings and queens. Goats specifically were used by women as a nymphomania cure. Yet, women most often used dogs. Cleopatra, who may have been circumcised in Egyptian custom, put bees on her genitals for vibrating stimulation.

Both sexes had bestiality with primates and bovines in Apis Bull motif. Sobek was the Egyptian crocodile god of fertility, the military and army. Men immobilized the crocodile putting them on their back and used them for increased virility and potency. Male pigs copulate up to an hour and swine are universally attached to feminine fertility.

Like Cretan women in a wooden cow the Apis Bull rites were more likely than not used similarly. Greeks in retribution to the Minotaur mythic sacrifice of their children invented the Brazen Bull for execution by-roasting victims alive. Fertility goddess Epona, the protector of horses, donkeys and mules god may have figured in why the Iliad’s Trojan Horse was readily accepted. Herakles’ tasks involved the cannibalistic transformed women as the Diomedes’ Mares and later the immortal White Mares.
Levant: Hittite, Canaanite and Hebrew-Hyskos

For Jerusalemic purposes Anatolian Northern Hittites were first power prior to Hebrew Hyskos. By 1300 BC they had laws on which animals were clean for sexual relations and other animals not clean. From Anatolia where many Greek deities had origin they extended into the Northern Levant. Hittites were not isolated; rather the crossroad consolidating Comixio Religionis from Indian Vedic to Nordic mythology.

Current Levant Countries: Syria, Lebanon, Jordan, Israel

Great Mother
Hannahannah

All participated in bestiality; regardless of religious edicts. The Hyskos were Egyptian. Politics was tribal. As Egyptians the Hyskos came to power through invasion establishing their Dynasties. The myth of Joseph recounts the Hyskos invasion of Lower Egypt next to the Mediterranean Sea splitting Egypt into Lower coastal Dynasties and Upper Egypt’s coinciding, concurrent, inland Dynasties. Eventually Upper Egypt kicked out the Hyskos in the Exodus. The Hyskos split into Judea with Benjamin and Israel of the ten remaining tribes. The Assyrians destroyed Israel when they drove out the Nubian Dynasty and soon afterward Nebuchadnezzar defeated Judea-Benjamin.

Joshua integrated Canaanite Baal Berith worship. Baal Berith means Lord of the Covenant, and when this appellation is first used. Variant great goddess consorts were various Asherah’s, variants themselves of Ishtar. Baal, with Moloch was child sacrifice. The area Shechem, with Dan, was one of the two sites for post Solomon circumcising Hathor’s Golden Calf temples. Canaan included Sodom and Gomorrah. Leviticus’s 18: 23-24, Code of Hammurabi, forbids bestiality. Jezebel’s dogs ate her after her horses trampled her to death after her eunuchs threw her off her balcony.

Canaanite Fertility Goddess
The Hebrews waxed and waned while developing their religious tenets prior to Solomon. The earliest written biblical text is the Book of J written at the time of Solomon. Judaism also has never totally left paganism from the time Solomon started worshiping the religions of his wives. Even after their return from Babylon they did not heed Ezra’s Warning against intermarriage with pagan wives and falling into the temptations of such practices which included bestiality. The addition of the Abraham circumcision myth occurred about 500 BC.[26]

Judaism attempted to incorporate into themselves Hermes, father of Pan, Priapus and Hermaphroditus through Comixio Religionis with Transformations of Myth through Time[27] to achieve Cultural Superiority as well as justification of both self and society by leaving its religious precepts including those against bestiality. Yahweh images 1st – 2nd Centuries BC:[28]

Bestiality was part of the lifestyle of both Egypt and Canaan. With deification of their animal partners; the partial human sacrifice of circumcision, a religious practice of Egypt to the bovine goddesses of the Taurobolium; child sacrifice by fire to the local Baals and Moloch as one of their various Burnt Offerings in Canaan and full human sacrifice in both Egypt and Canaan like bestiality, the Hebrew Testament addresses:

Leviticus 18:3 (The Sanctity of Sex) You must not do as they do in Egypt, where you used to live, and you must not do as they do in the land of Canaan, where I am bringing you. Do not follow their practices.

Talmud NOT Torah

After the defeat of Judea by Rome the Talmud officially reintroduced bestiality into newly restructured Benjamite-Judaism with the Khazars. It specifically forbids a widow from owning a dog to remove what they believe to be the probable temptation of bestiality. But, the Talmud does not specifically forbid men from having sex with animals. One codicil to Talmudic Bestiality is that the male’s animal could be sacrificed to remove further temptation and place guilt upon the animal.

The Talmudic religious concept is the same as necrophilia. There is no soul in an animal or a dead body. Also, the same holds for sex with a Goyim child before 3 years 1 day because all others possess Lesser Souls. And even for all females less than 9 years 1 day because it is as if their spirituality has not made their soul complete. Boys are considered and treated the same. Contemporarily this is only Talmudic Fundamentalism which few adhere to or at least participate in.
Christianity

Christianity has never accepted bestiality within any of its religious tenets though they had to deal with the issue. From the fall of Rome to the time of Columbus bestiality was common in Europe. Paganism was commonly practiced in many areas. They considered bestiality healthy and able to cure some diseases. The pastoral setting was the main way of life and animals even shared human living spaces.

Pagan Germanic law did not prohibit bestiality, but bestiality prohibition was added with conversion to Christianity. Ireland first addressed bestiality as a minor sin equivalent to masturbation. From the Council of Ancyra Ireland took certain aspects of the Talmud that the animal has to be sacrificed as a possible willing partner and by the killing erase the memory from the offender’s mind.

From the 6th Century into and during the Visigothic period in the 8th and 9th Centuries Spain and other locations equivocated bestiality with sodomy and homosexuality. Penance for both was 20 years. The Welch required a year of fasting for a married man, but if single and living alone the penalty was three periods of 40 day fasting. In this, during the 17th and 18th Century European Age of Enlightenment bestiality and sodomy became sexual crimes against nature. Contemporarily, with urbanization decreasing the pastoral setting especially evident in Scandinavia penile cancer rates have decreased in clinically significant numbers.[29]

The Islamic Moors conquered Southern Europe and the Jewish population enjoyed social communion with them. After the defeat of the Moors the Catholic Church turned inward with the Inquisition. Bestiality was equated to the ancient horned gods from which the Talmud and Hadith semi-accommodated. It became an expansive retribution against the taking of children and women into slavery, castration and circumcision: Blood Libel. The horned gods represented became demons which some worshipped as animals of sexual union. Pan became the goat horned devil of today.
Islam

Islam appears to have always accepted bestiality tenets though against Mesopotamian origins where alla, the god that rebelled, became Allah (‘h’ meaning similar to a new age as Sarai into Sarah for the Hebrews). These tenets appear to have origin in worship of Devouring Mother aspects of Kali, Ishtar, Hecate, Cybele, Aphrodite and Venus. Yet, Islam too has to deal with the issue of bestiality. In Arab tribal culture bestiality with camels, goats, mares and sheep provide sexual outlets for boys. Annamites commonly use sows for males and dogs for women.

In 1923 Palestine sodomy and bestiality were known. Sodomy was a disgrace, while there were no feelings or prohibitions against bestiality.[30] In the Sudan a penalty is possible that the man must marry the animal. In Morocco bestiality and masturbation are seen as normal obligations for a male to become adult; and, belief that sex with a donkey makes the penis grow longer and stronger.[31] Donkey sex harkens to the Egyptian god Min and Greek god Priapus. Goat sex relates to Greek Pan while dogs belong to the goddesses Isis and her Dog Star Sirius.

Pakistan leads the world in Internet bestial viewing: pig, donkey, dog, cat, horse, cow, goat, snake, monkey, bear and elephant sex.[32] Islam has the Bacha Bazi culture of pederasty to the point of the boy must take the Seed of the Imam both intellectually and physically. Bacha Bazi is known to NATO troops in Afghanistan as Man Love Thursday and practiced by both the Taliban and Islamists who work with NATO. NATO forces have, through curiosity, documented bestiality with night vision technology.

Islamic acceptance of males having sexual intercourse with female children, women and older women is based on menstrual theology (Qu’ran 65:4). This may indicate a cultural arrested development in comparison to most other cultural advances. Sexual abuse increases the propensity to bestiality.[33] Circumcision is incestuous and fits ancient bestial social living.[34,35]
HISTORY

It’s all about sex. If our ancestors did not have sex we would not be living as we are today. If the current population does not have sex the human species will not continue. *Homo sapiens* are part Neanderthal and Denisovian. When they had sex their offspring can be considered what horse breeders call an *Outcross*. An Outcross like the race horse Secretariat is from two widely separated lines of the same breed of an animal. An Outcross can also be from a widely separated line of a species itself.

The racehorse Secretariat was an Outcross lucky enough to also possess what Animal Husbandry terms *Hybrid Vigor*. Though Secretariat possessed a specific combination of genes that made him an excellent race horse the problem for horse breeders is an Outcross cannot breed true to the factors that made him so special. It’s the specific combination that made him what he was and those who invested in him for Stud were vastly disappointed. He could not breed *True*. Humanity is a result of Outcrossing.

Neanderthal, Denisovians and Sapiens were the same species per-se because they were able to produce viable offspring. Yet they were separated enough to where the Neanderthal female had a genetic component that inhibited her male Neanderthal-Sapiens offspring being fertile, or to the point she could not carry to term a male child from a Sapiens male. Thus our Neanderthal genes come from the Neanderthal male. This is why there is no Neanderthal female *mitochondrial* DNA genetics in humanity today. Also there is genetic evidence of incestuous Neanderthal half-sibling offspring, which is normally small tribal.[36,37] Denisovian genetics is currently being researched.

Bestiality may reach back to and beyond this era well over 100,000 years ago.
CONCLUSION

Research is necessary to find susceptibility, and how statistics with bestiality will alter: Bestiality to penile cancer, cancers of the female reproductive system, venereal diseases, animal vector diseases (zoonosis), allergic reactions and contact chemical irritation.[38] Bestiality has been an integral part of humanity with developed deep psychological usage into the spiritual, theological and religious. It is a lifestyle and does not appear to be used in initiation rituals.[39] Zoophilia is not considered psychopathic behavior specific with a Disorder compared to nicotine’s Smoking Disorder.

Suspicion: Studies advocating circumcision are tainted academically toward personal, not medical, opinions of those who published. *Behavior Modification is the prophylactic cure otherwise patient education.* It is as if religions make theological and penalty adjustments to persistent behaviors. Medicine and medical researchers are abdicated to Cultural Convention disregarding the Rule of Law misleading society. Infant and adolescent circumcision of both sexes without disease present is **criminal** behavior. For medical purposes to advocate circumcision of either sex without further knowledge is inappropriate.
